

Obtain Client ID and Client Secret from PayPal

Prior to configuring the PayPal Payment Gateway integration, an organization must have a PayPal business account. To retrieve the **Client ID** and **Client Secret** values required for configuring a payment account in our app:

1. Go to: <https://developer.paypal.com/developer/applications/> and log in with your PayPal business account credentials.
2. Navigate to the My Apps & Credentials tab and click the **CREATE APP** button in the REST API Apps section. This allows our app to authenticate with PayPal and process payments.
3. Name the application (this does not impact the integration) and associate the sandbox test account.
4. Click the **CREATE APP** button.
5. The App will be created and the administrator can copy the **Client ID** and **Secret** from this page for the sandbox environment into the Modify Payment accounts page in their Cornerstone Stage environment. **Note:** *These values do not expire, but they can be disabled by an administrator if needed.*

The screenshot shows the PayPal Developer dashboard for an application named "CSOD Test". The page is divided into a left sidebar with navigation options (Dashboard, My Apps & Credentials, My Account, Sandbox, Mock, Live) and a main content area. The main content area has tabs for "Sandbox" and "Live". Under "Sandbox API CREDENTIALS", there is a "Sandbox account" field with the email "jnguyen-facilitator@csod.com". Below that is the "Client ID" field with the value "AXZczmwIHQzu7w6ecXH4ZiML-VPXot8metcsZMwbaXITkp9w3b8ol7-hSHHrB9NEmPv-MPVmoeVgdjB". The "Secret" field is partially visible with the value "ECrc8Gb6FEMoJJSc5kCc00V4CmHiu1pixE2mIXPwmyixbzR0t8mTDtoyIEmy6Z_xCpbX7vTd99r73_Tk". A table below the secret field shows the creation date "Jul 10, 2018" and the status "Enabled". A "Generate New Secret" button is located at the bottom of the secret field.

In order to view the **Client ID** and **Secret** values for the Production environment, click the Live tab in the upper-right of the PayPal business account page and repeat step four in the Production environment.

LIVE WEBHOOKS

Configure webhooks to notify your app when certain events occur. To configure a webhook, define your webhook listener URL and a list of events for which to listen. You can configure up to ten webhooks. Each webhook can subscribe to either specific events or all events. To learn more about webhooks, see [webhooks notifications](#).
